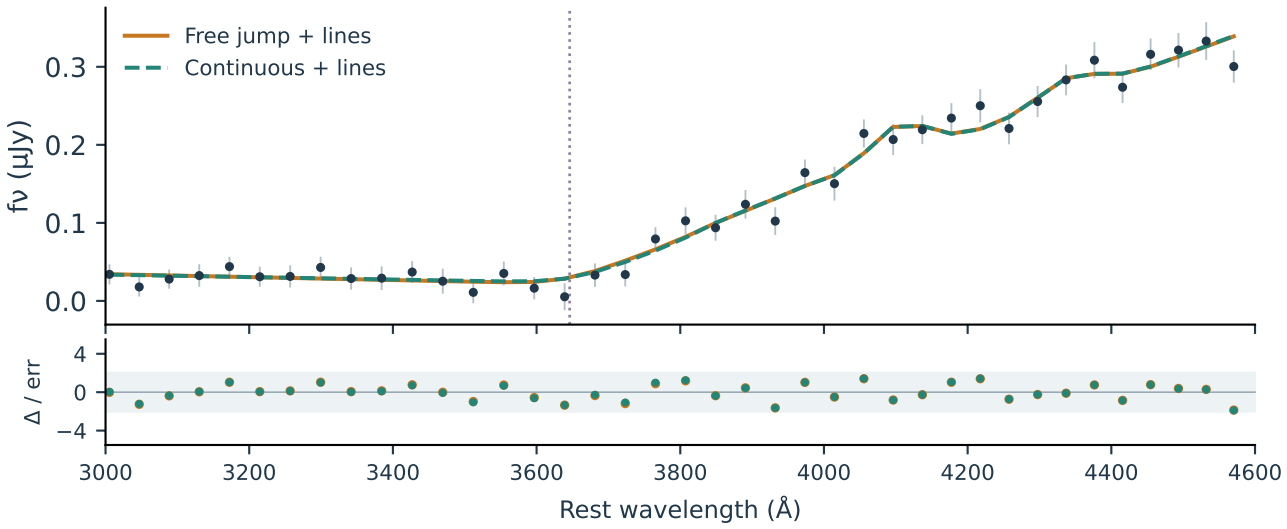
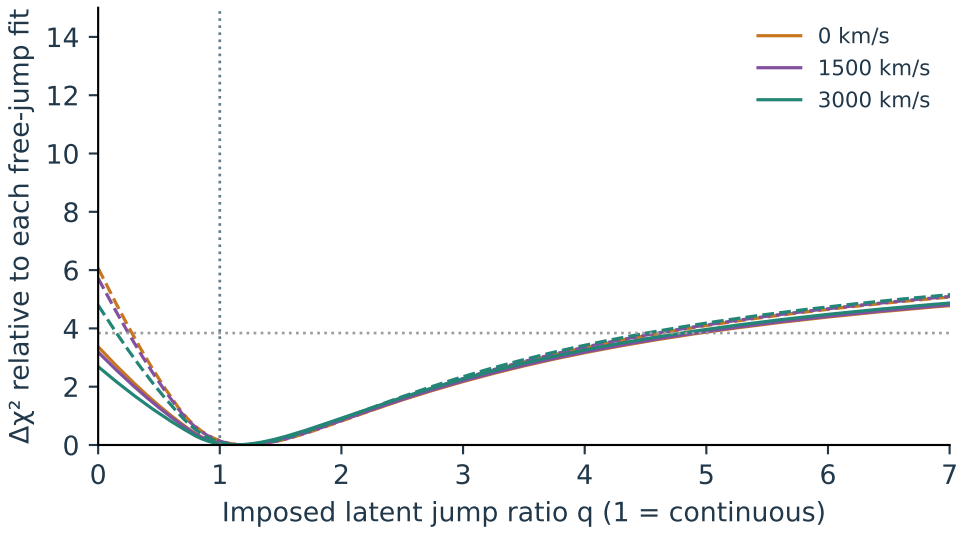
Conditional line + continuum diagnostics

Actual spectra and explicit model failures · None of these curves is a physical decomposition

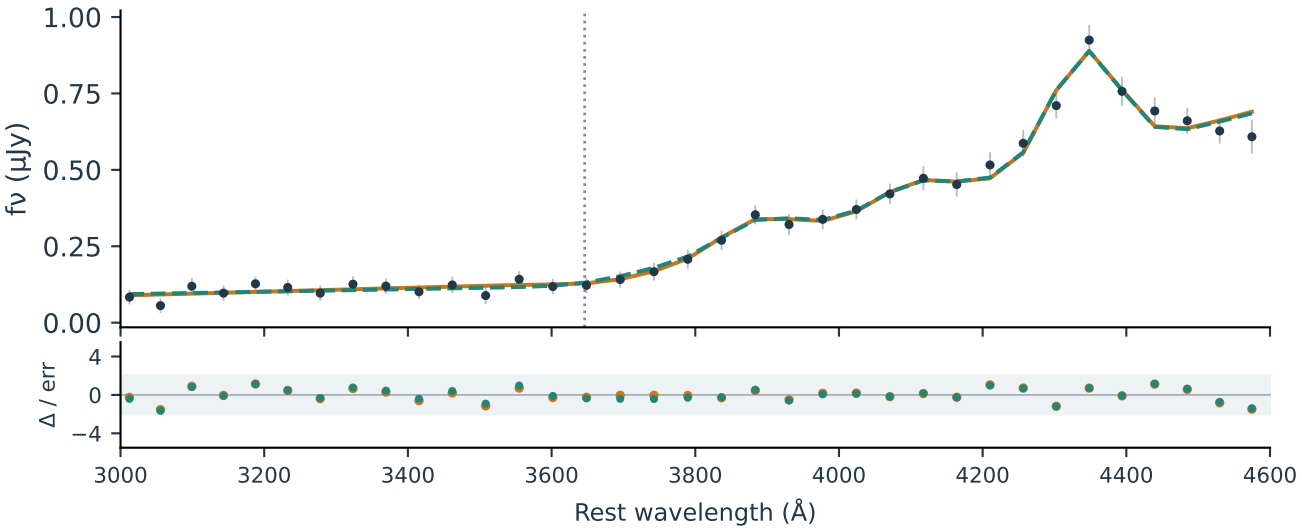
The Cliff



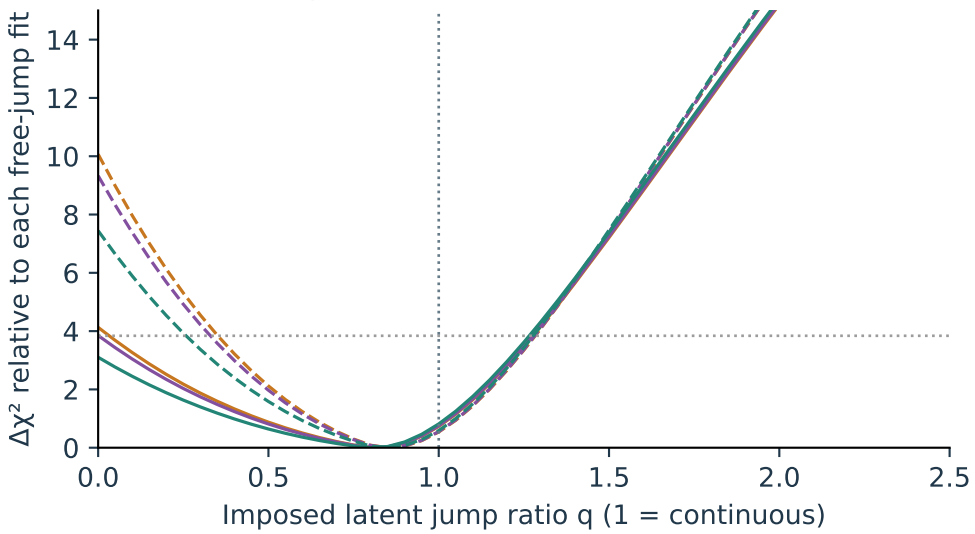
Profile sensitivity; solid R, dashed 1.3R



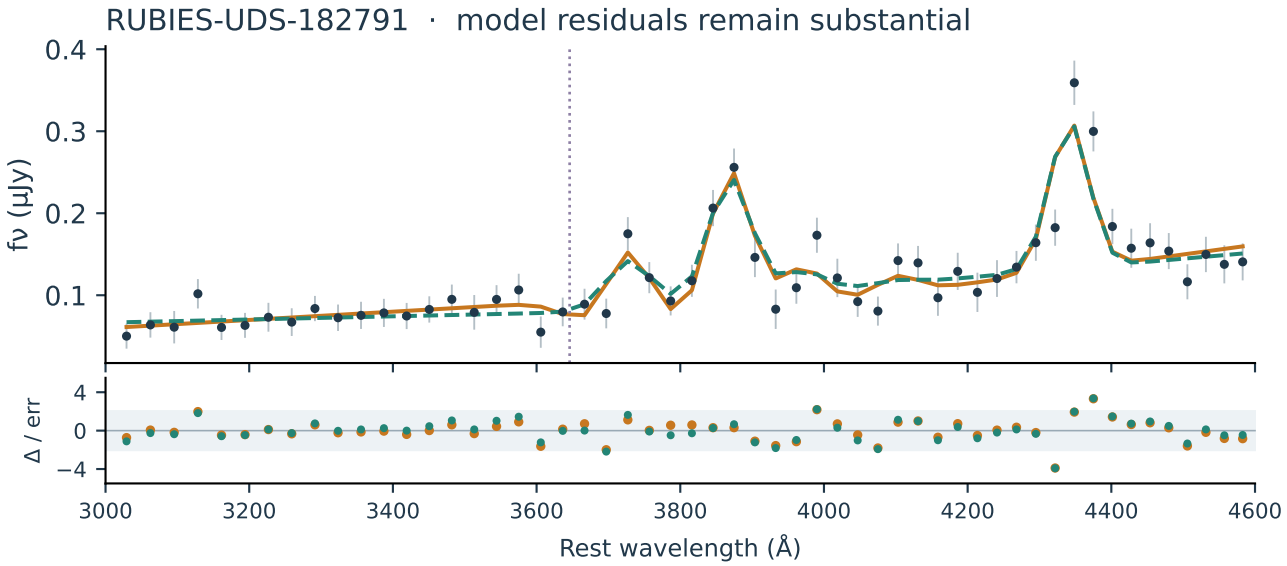
RUBIES-BLAGN-1



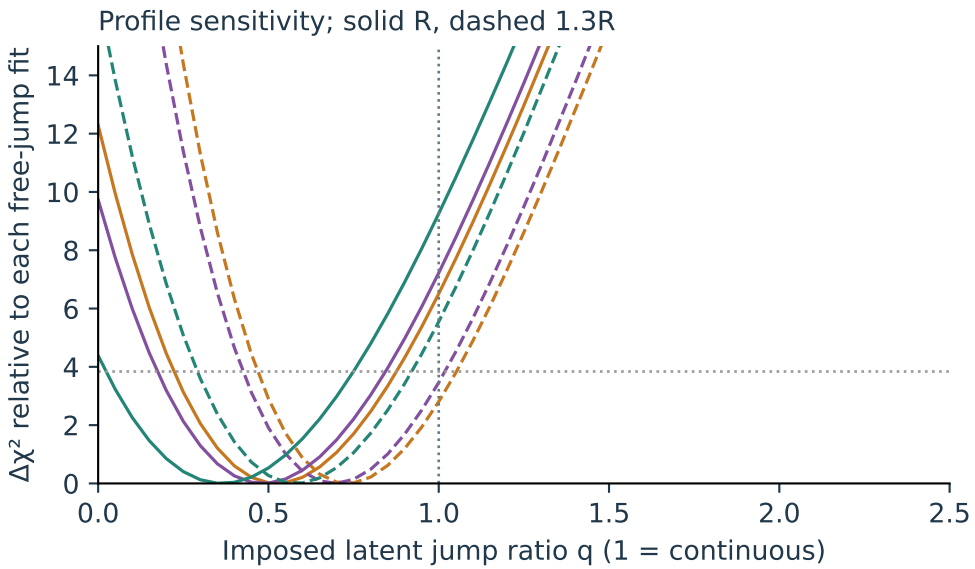
Profile sensitivity; solid R, dashed 1.3R



RUBIES-UDS-182791 · model residuals remain substantial



Profile sensitivity; solid R, dashed 1.3R



All panels use archive-rescaled independent errors; smaller raw errors give worse residual scores (especially BLAGN-1).
$\Delta\chi^2 = 3.84$ is a diagnostic, not calibrated confidence. Widths, continuum family and Gaussian resolution are assumptions.
Full q grid extends to 200 in the tables. Human science / release review pending.
